

PASS THE  
“CLEAN WATER FOR  
ALL LIFE ACT”  
IN YOUR STATE!

Ensure Water Quality & Hold Chemical Abortion Pill Producers Accountable

## WHAT'S IN THE WATER?

When a mother has a Chemical Abortion at home, the human remains of her child and pregnancy tissue are often flushed down the toilet, along with still-active endocrine disruptors from *mifepristone*.

Because of this, more than 50 tons of abortion pollution and human remains enter our water system every year and may harm humans, plants, and animals.

## A WICKED TOXIC PROBLEM:

*Endocrine-disrupting chemicals* (EDCs) are substances that interfere with the regulation of hormones in the body. EDCs can decrease or increase normal hormone levels, mimic the body's natural hormones, or even alter the natural production of hormones. Hormones send signals to tell the body what to do and when to do it. They are responsible for controlling critical processes such as metabolism, blood pressure, blood sugar regulation, water & electrolyte balance, temperature, growth & development, and even mood.

Specifically, the first pill of the two-pill Chemical Abortion protocol, *mifepristone*, contains a progesterone blocker. Progesterone, known as the “pregnancy hormone,” helps sustain a pregnancy, but men and women

During a Chemical Abortion, EDCs are discharged when mothers abort their children into toilets or bathtubs and are carried in the wastewater to treatment facilities, where they are not removed during the treatment process. This same water is recirculated back into the drinking water system or discharged into surface water, where it is then used on farms & ranches.

## PRESERVE THE DIGNITY OF PREBORN CHILDREN:

Hospitals and brick-and-mortar abortion vendors are not legally allowed to flush human remains or placenta tissue. Even the abortion-supporting *World Health Organization* notes: "The disposal of untreated health care wastes in landfills can lead to the contamination of drinking, surface, and ground waters if those landfills are not properly constructed." And the *American Academy of Family Physicians*, in discussing medical waste disposal in home-based healthcare noted, "Inappropriate medical waste disposal can pose harmful environmental concerns and significant health risks to the public."

All common sense & common decency have been flushed away by Online, No Test Distribution of Chemical Abortion Pills, leading to mass graves in our public waterways. **We've turned our sewers into cemeteries.**

At a bare minimum, **companies that profit from Chemical Abortion Pills should be responsible for cleanup**, as dangerous chemicals & human remains are leaching into our water supply. In addition, abortionists should be required to provide mothers a way to safely collect the remains of their children and pregnancy tissue that respects the human child and does not pollute drinking water.

## IF PASSED IN YOUR STATE, THE "CLEAN WATER FOR ALL LIFE ACT" WOULD:

- Hold the Chemical Abortion Pill industry **criminally or civilly accountable**;
- Require abortionists to provide instructions & materials to women for the **safe disposal of chemically tainted human remains**;
- Raise awareness about the gruesome nature of Chemical Abortion Pills and the potential **environmental impact** of abortion water pollution.
